

Configuring Iridium Go !

Avalon Offshore for iOS
Avalon Offshore for Android

June 26, 2019

A. Introduction

An Iridium Go! has a built-in firewall to prevent unauthorized apps to access the Internet and generate unnecessary transmission costs.

To enable Avalon to retrieve weather data, it is therefore mandatory to open Iridium access to our servers containing weather data.

Of course, it is always possible to retrieve weather data via a traditional method, such as Saildocs request and load the retrieved grib file into Avalon. But this traditional method is not recommended as it will cause higher volume transmission and higher Iridium costs.

- Grib files transmitted via mail have a 30% overweight due to the text format used by Saildocs.
- Avalon uses a proprietary compression system that reduces the transmitted volumes by a factor of 6 versus a traditional Saildocs mail request.

B. Configuration

To validate Avalon Offshore on your Iridium Go!, you have to:

1. Go the management menu of your Iridium Go! and then to « Advanced ».

2. Then « Firewall settings »

3. You need to add 2 exceptions to the firewall as Avalon Offshore uses 2 servers for weather data.

IP Addresses are:

- 198.100.144.78
- 91.121.30.95
- Choisir « Tous ports »
- Sélectionnez le protocole « TCP »

All Ports (0-65535) Both ▾

Firewall Exception List

IP Address	Port	TCP/UDP	Delete
All	20	TCP	✗
All	21	TCP	✗
All	25	TCP	✗
All	53	TCP	✗
All	80	TCP	✗
All	110	TCP	✗

Those 2 IP addresses should be visible in the list at your Iridium Go! authorized sites.

C. Calculating an Avalon route with Iridium Go!

You have to:

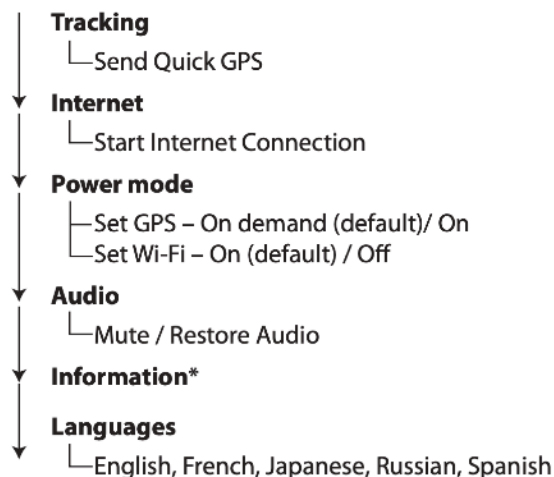

- Select « Iridium » on Avalon Offshore main page.
- Select NOAA GFS 1 degree Iridium in the wind sources. This source is highly compressed.
- The tablet should be connected to your Iridium Go! network
- The Iridium Go! should be in Internet mode. To open an Internet connection on your Iridium: « Internet » then « Start Internet Connection » then « Yes ».

6: Additional information

Device features

The Iridium GO! device screen displays the status of the device or activity with the application. The configuration menus are navigated by using the left and right buttons. To conserve power, the screen will automatically turn-off after a period of inactivity. To turn the screen back on, press either the navigation button or the power button on the device.

The following is an outline of the menu system on the device; as the menus can be navigated by using the left and right buttons.

6

- Then calculate a route in Avalon. Refreshed winds are downloaded, if available, and the route is computed.

Important: Please test above process before leaving the harbor.
